# Contents

---

## Regional energy trends

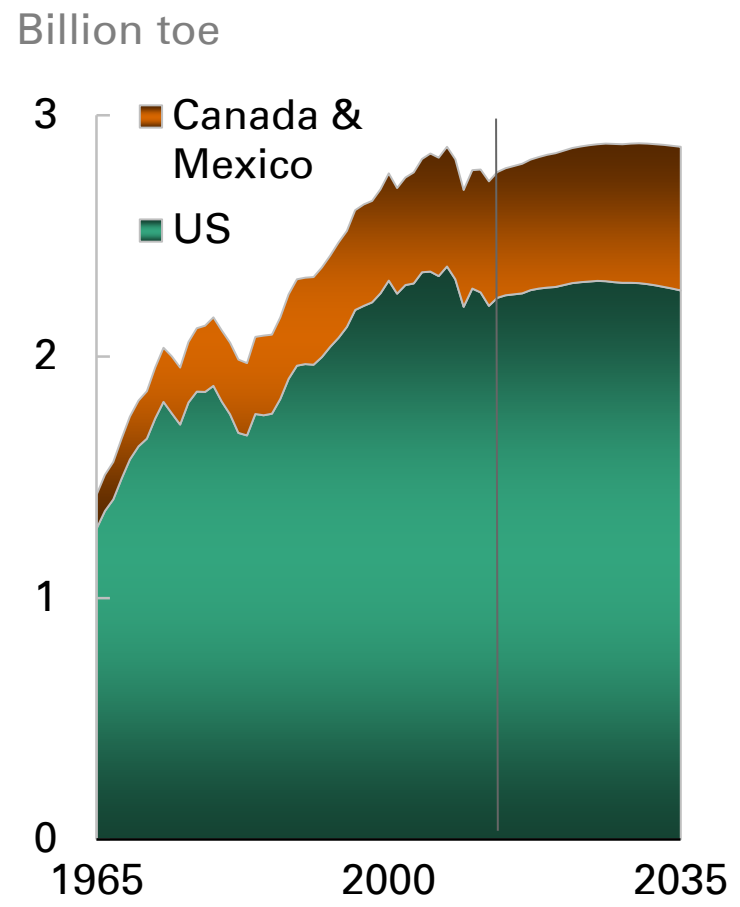

Fuel by fuel

Carbon emissions and the fuel mix

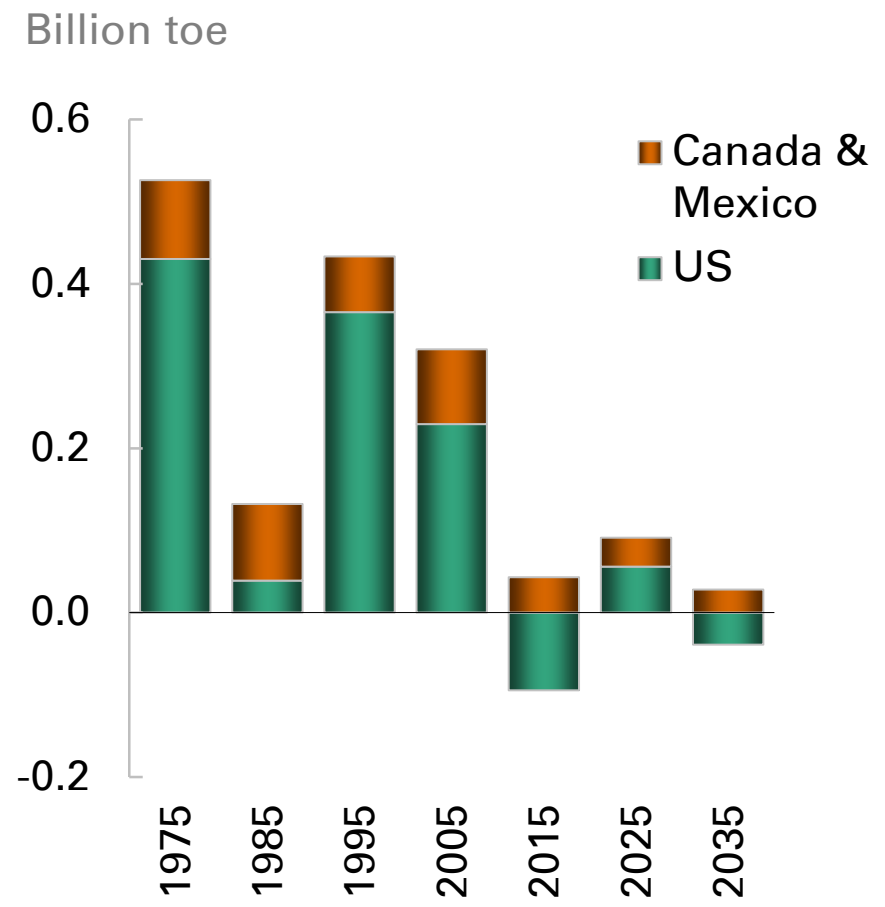

# North American energy use rises slowly and peaks in the US

## Consumption by region

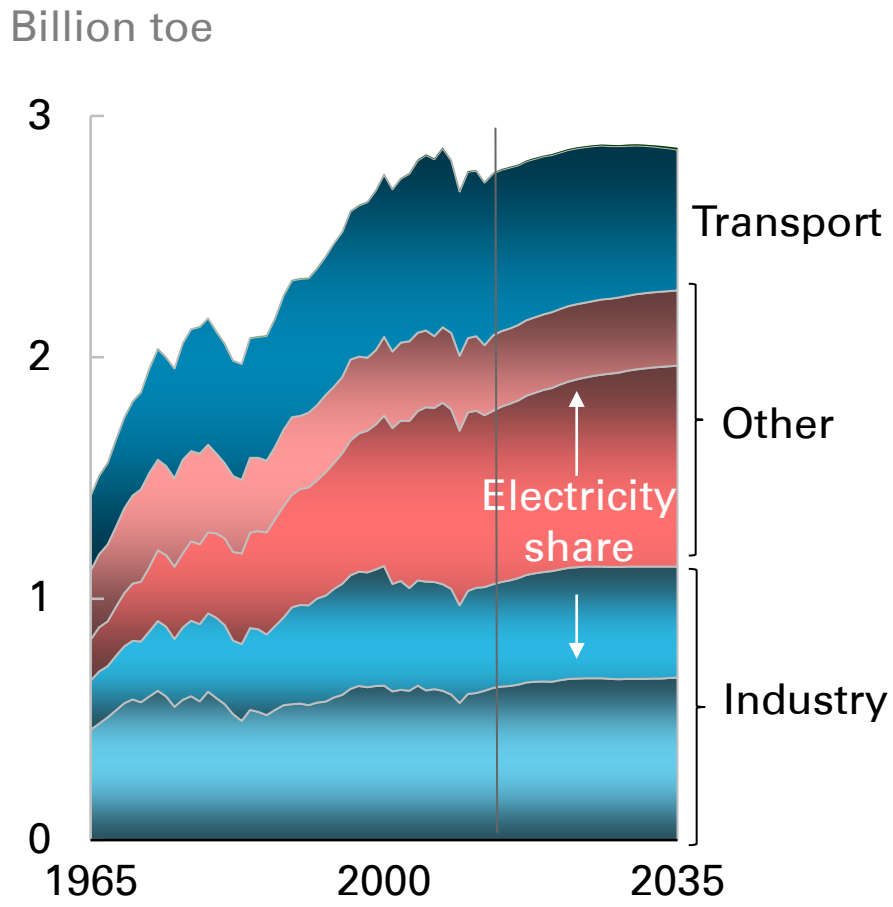

## Ten year increments by region

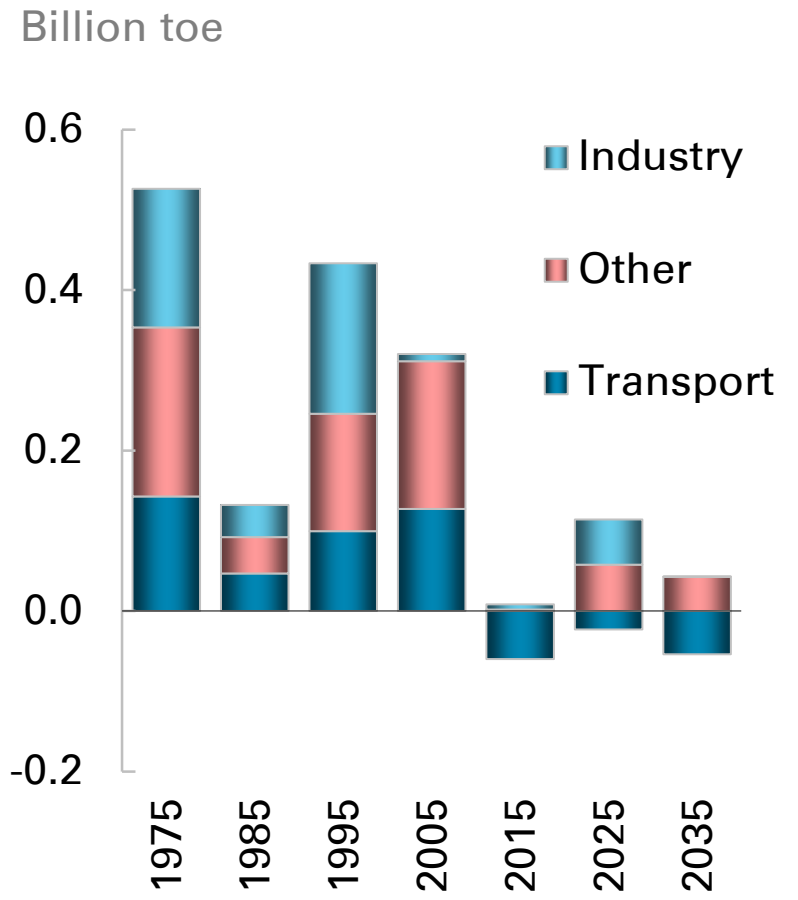

# Falling transport demand offset by 'other' (including power)

## Consumption by sector

## Ten year increments by sector

# Decline in oil demand, increases for natural gas & renewables

## Consumption by fuel

Billion toe

## Ten year increments by fuel

Billion toe

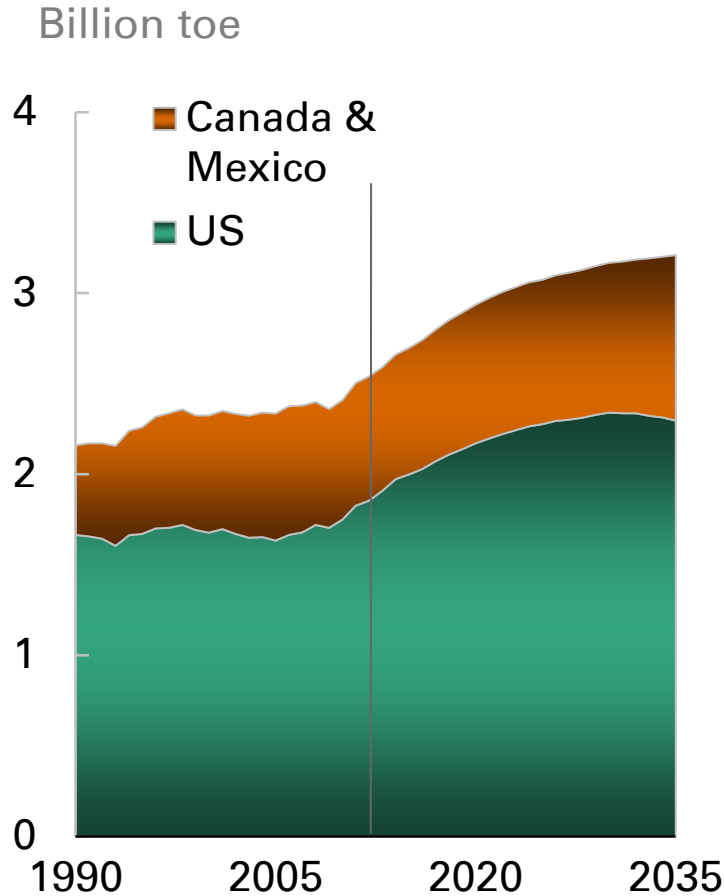

\*Includes biofuels

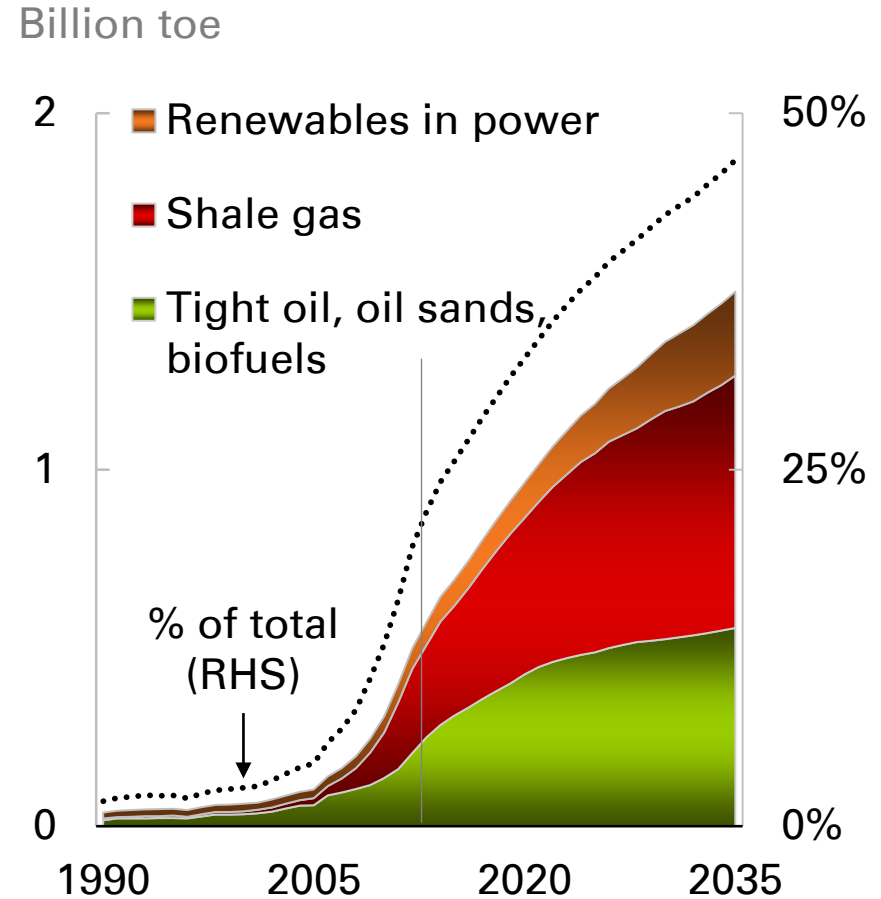

# North American output growth led by gas, oil & renewables

## Production by region

## New energy forms

# Energy decouples from economic growth and fuel shares shift

## GDP and energy

## Shares of primary energy

\*Includes biofuels

# The power sector takes an increasing share of energy use

### Inputs to power as a share of total primary energy

### Primary inputs to North American power

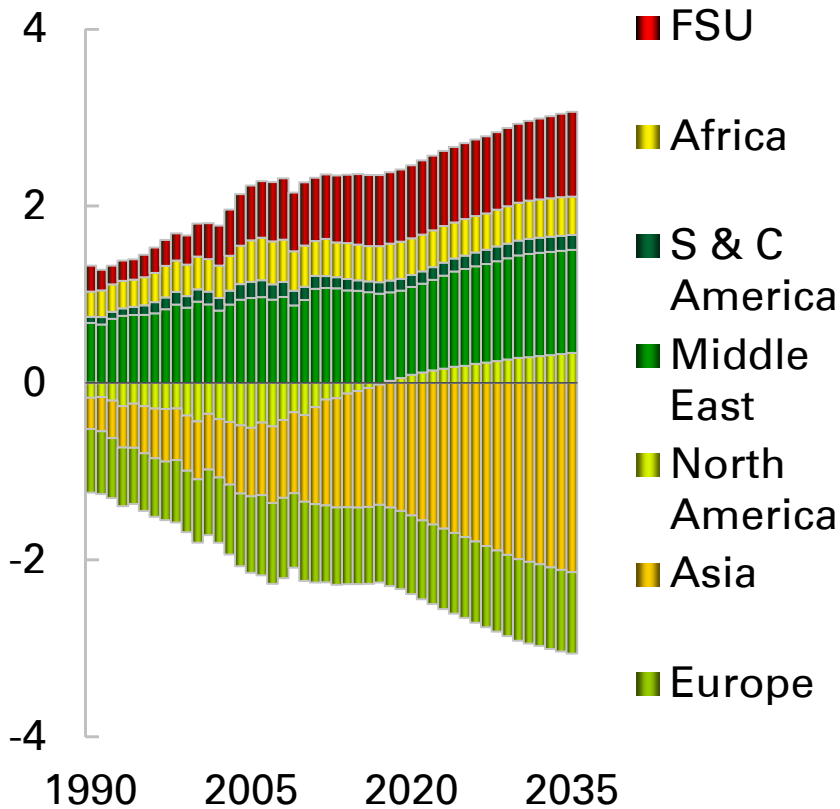

# North America switches from net importer to net exporter

## Primary energy net balances

Billion toe

## Regional fossil fuel balances

Billion toe

---

Regional energy trends

**Fuel by fuel**

Carbon emissions and the fuel mix

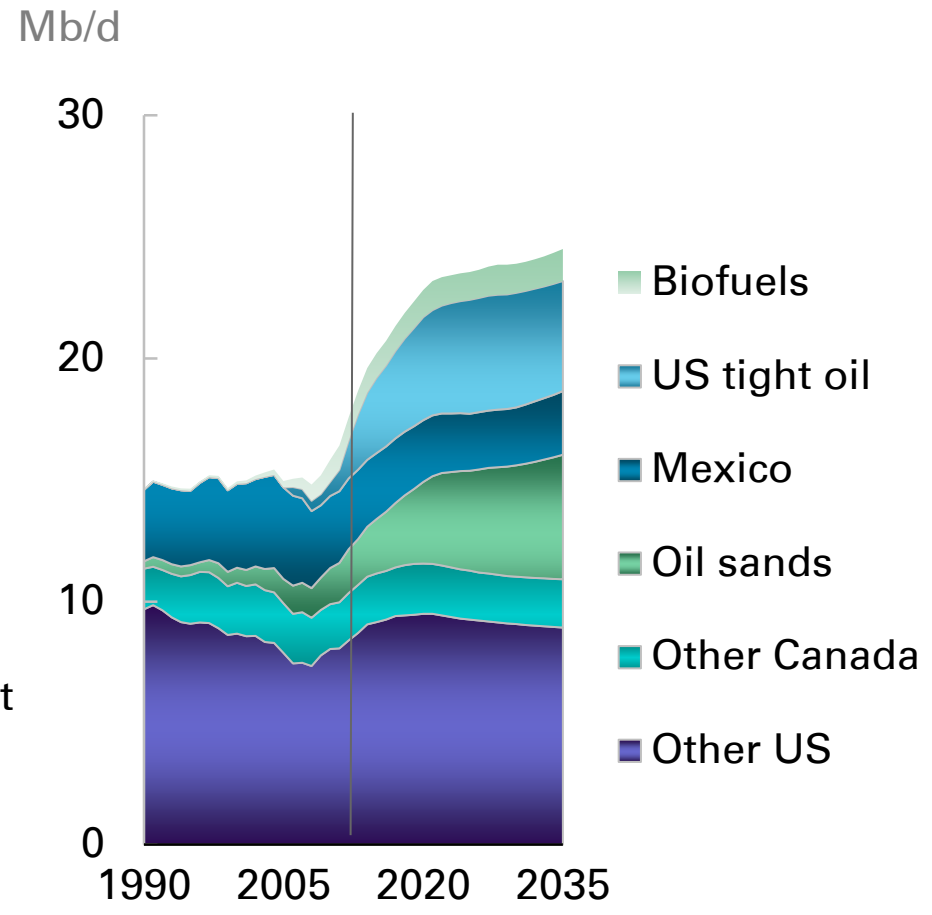

# Oil: Falling transport demand and rising unconventional

## Liquids demand by sector

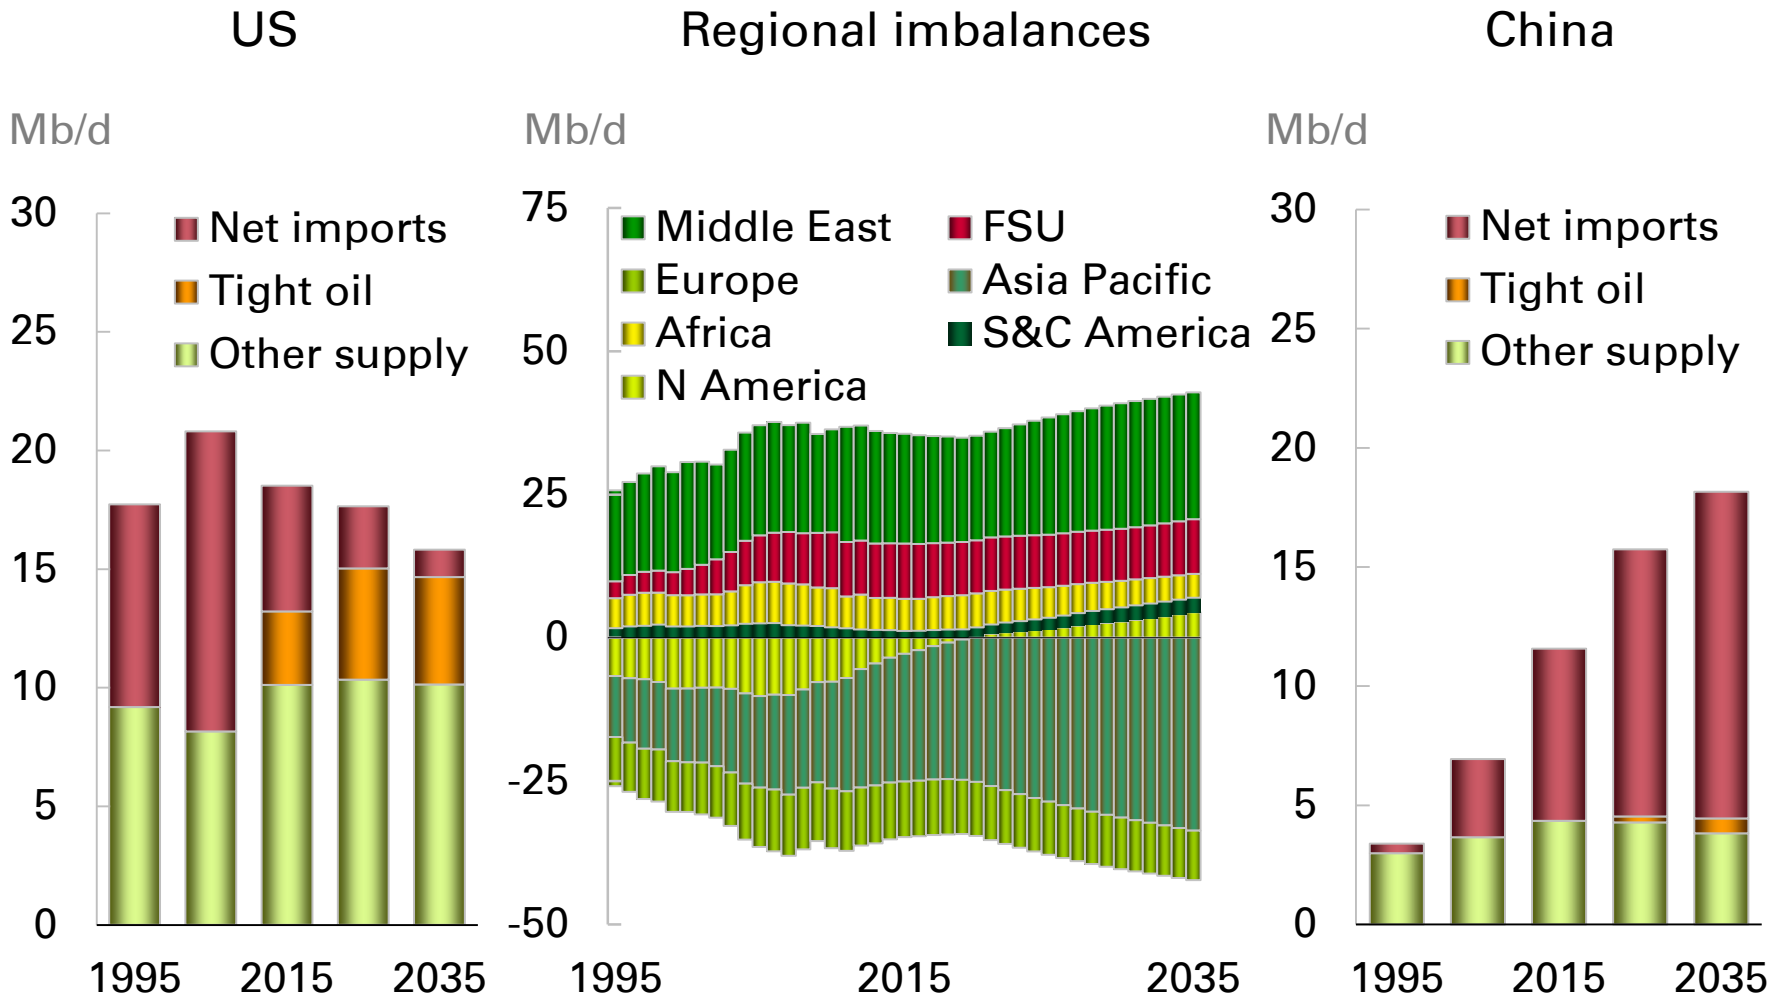

## Liquids supply by source

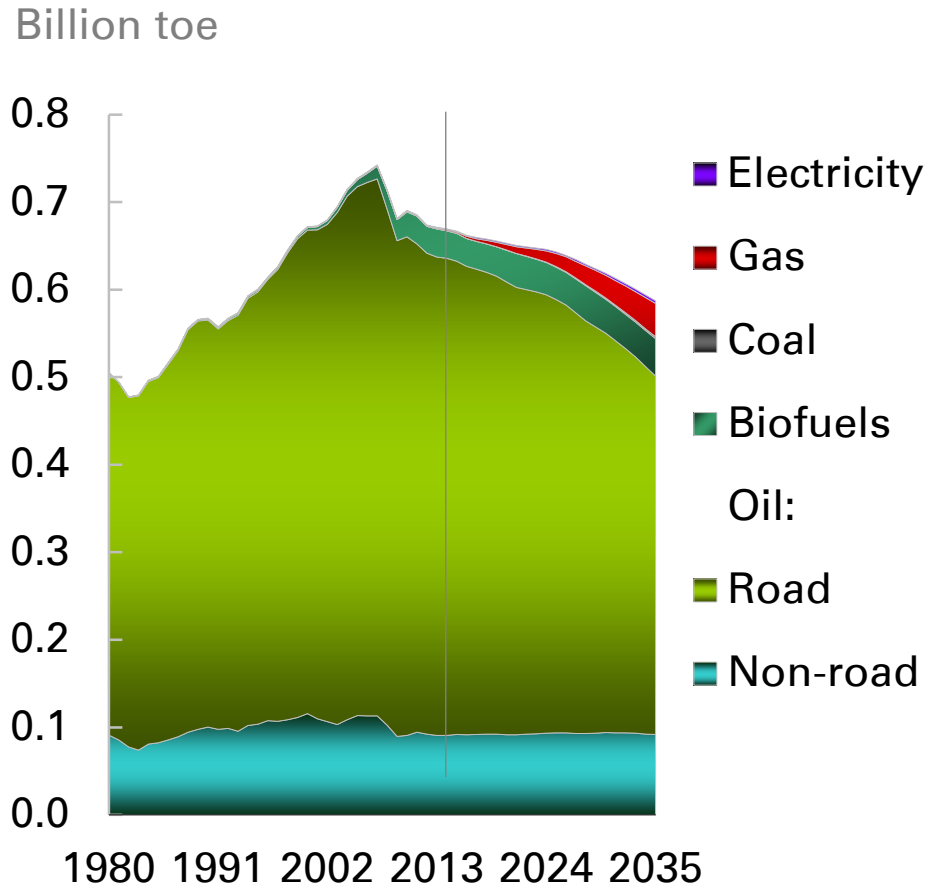

# Oil trade continues to shift from West to East

# Regional transport demand declines driven by fuel economy

## Transport demand by fuel

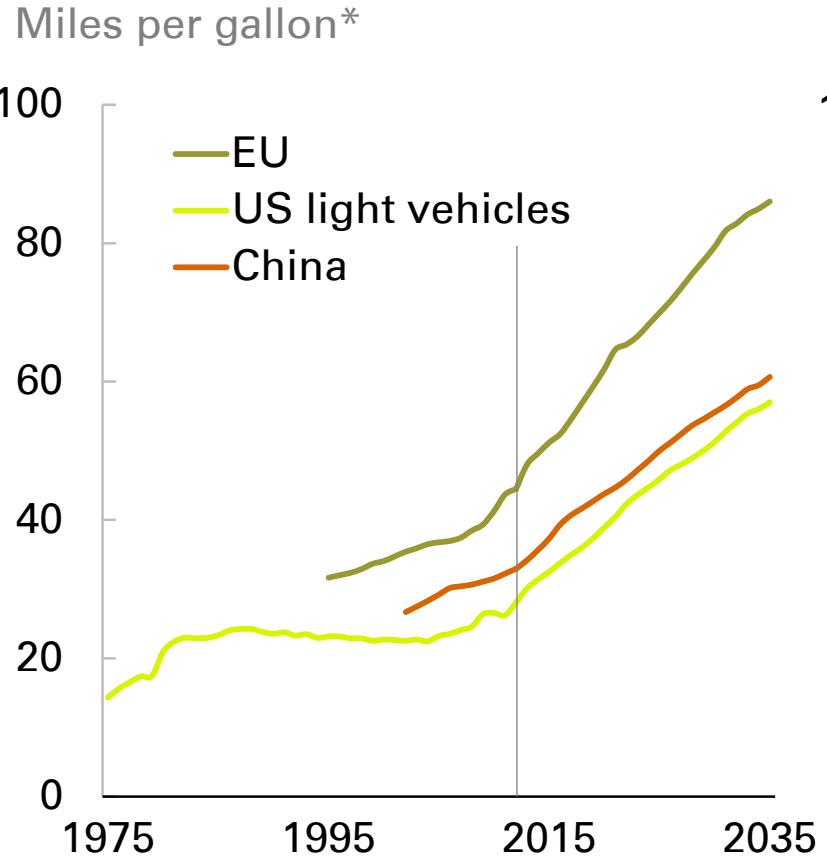

## Five year increments by fuel

# Policy and technology enable efficiency improvements

## Fuel economy of new cars

## Vehicles sales by type

\*New European Driving Cycle Basis

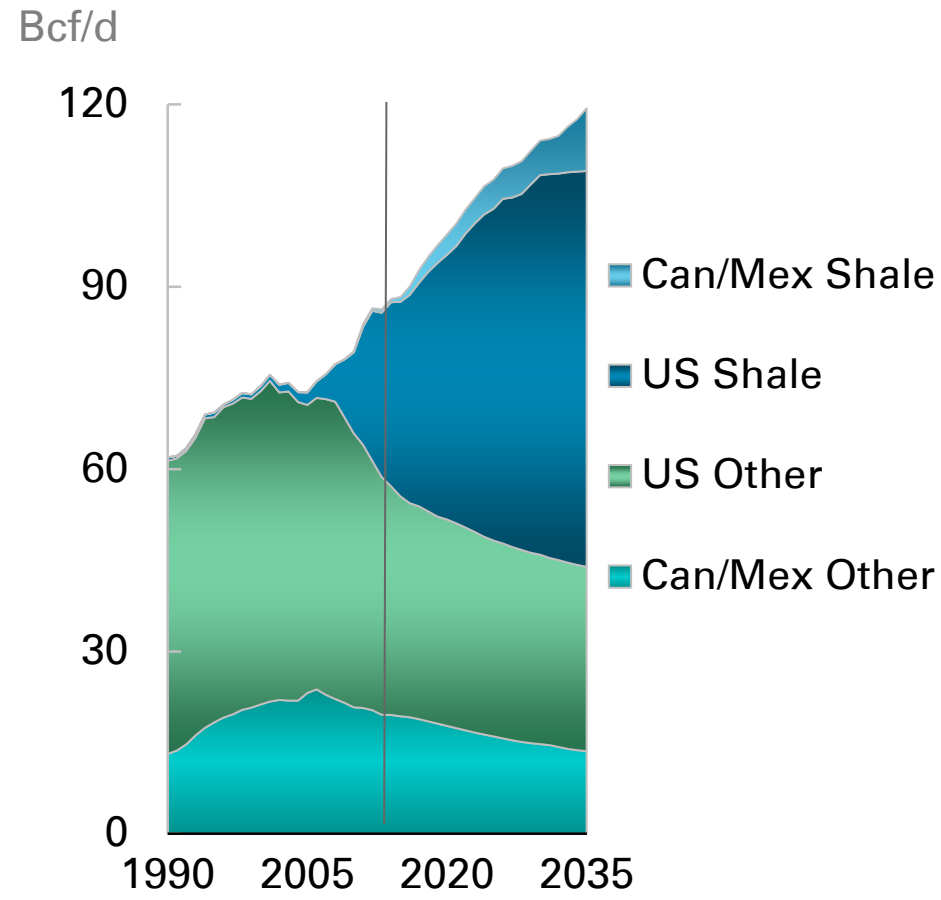

# US natural gas use rises in all sectors; shale dominates supply

## Gas demand by sector

## Gas supply by source

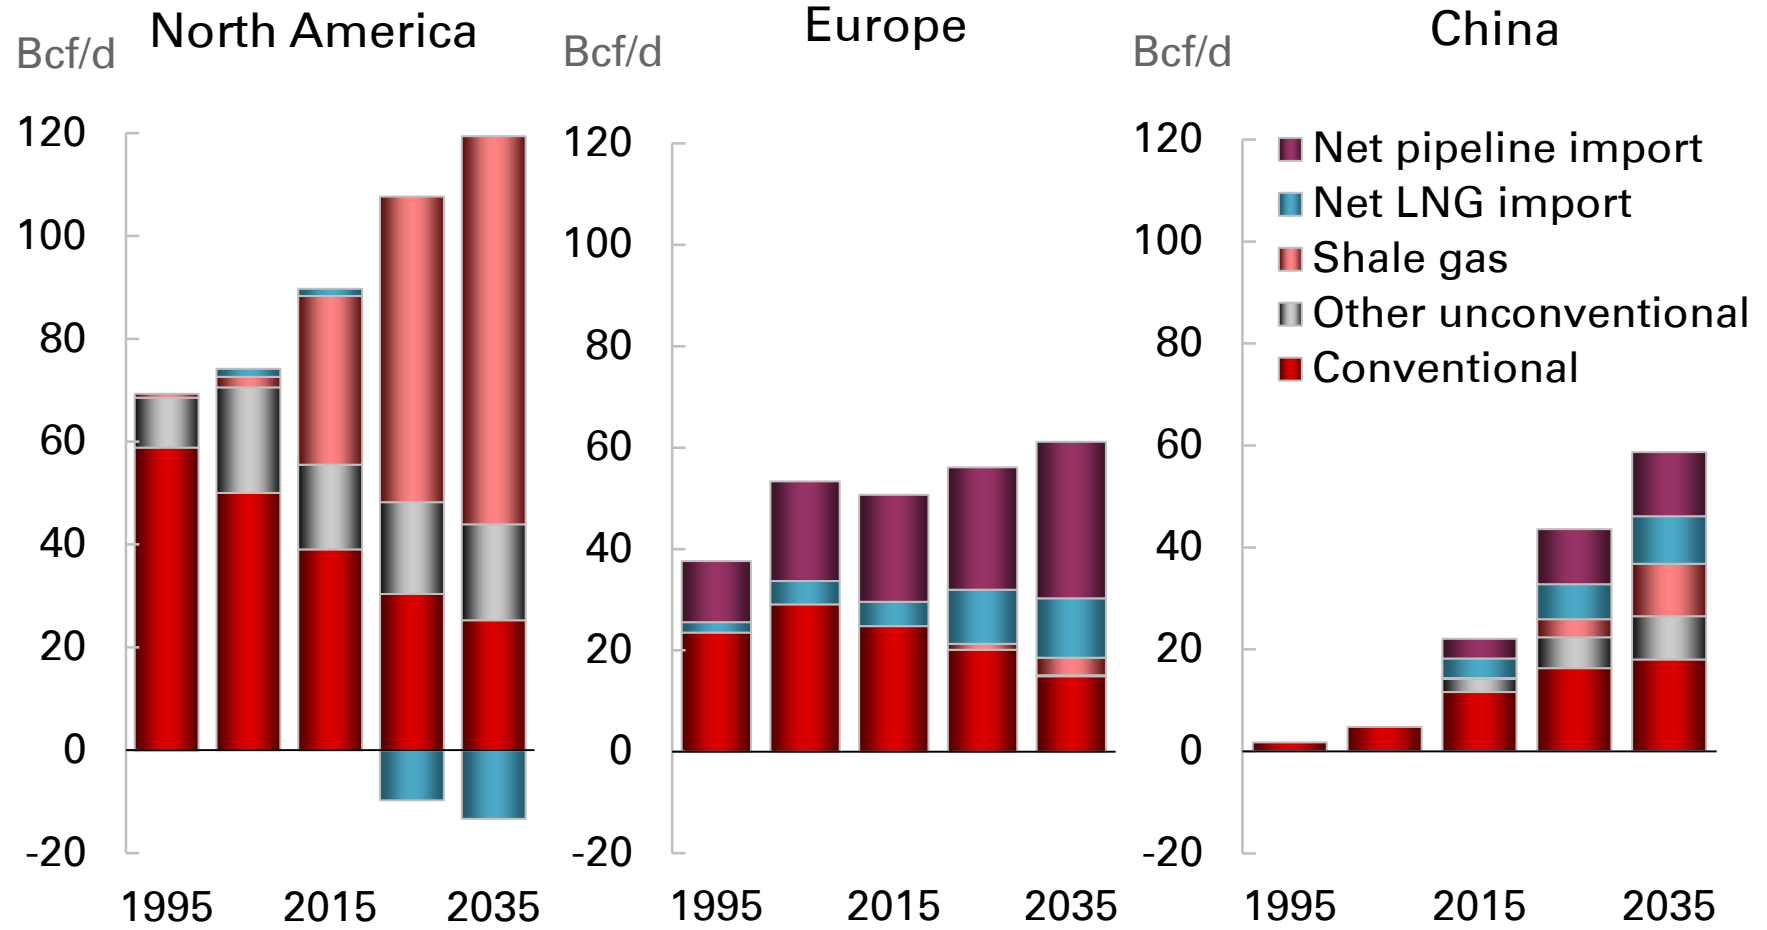

\*Includes transport

# Different regional prospects for unconventional gas and trade

## Sources of gas supply by region

# The US shale revolution: An example of market adjustment

## US oil and gas supply

Billion toe

## Gas share of US sector demand

# North American coal demand declines; renewables expand

## Coal demand by sector

## Non-fossil fuel demand

---

Regional energy trends

Fuel by fuel

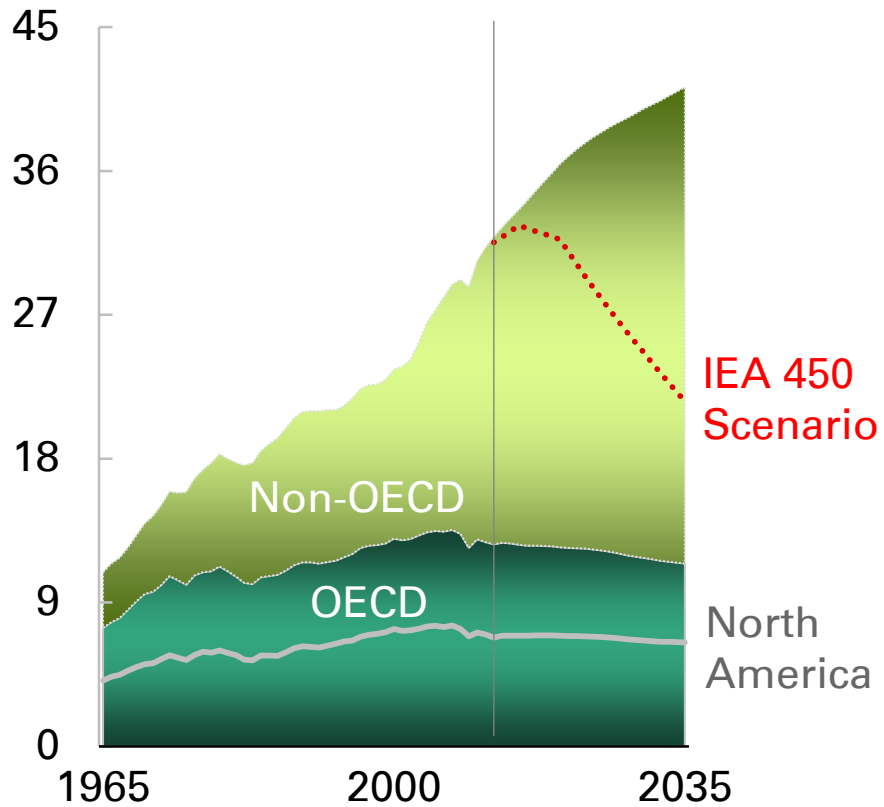

**Carbon emissions and the fuel mix**

# CO<sub>2</sub>: Emissions from energy rise globally, fall in North America

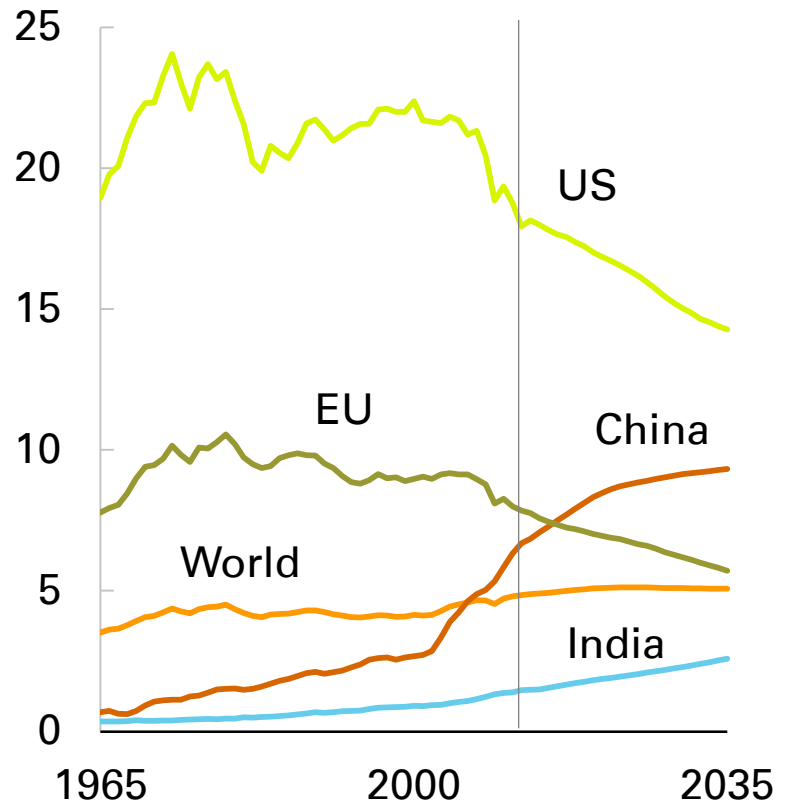

## Emissions by region

Billion tonnes CO<sub>2</sub>

## Emissions per capita

Tonnes CO<sub>2</sub>

# Efficiency, not fuel mix, restrains North American emissions

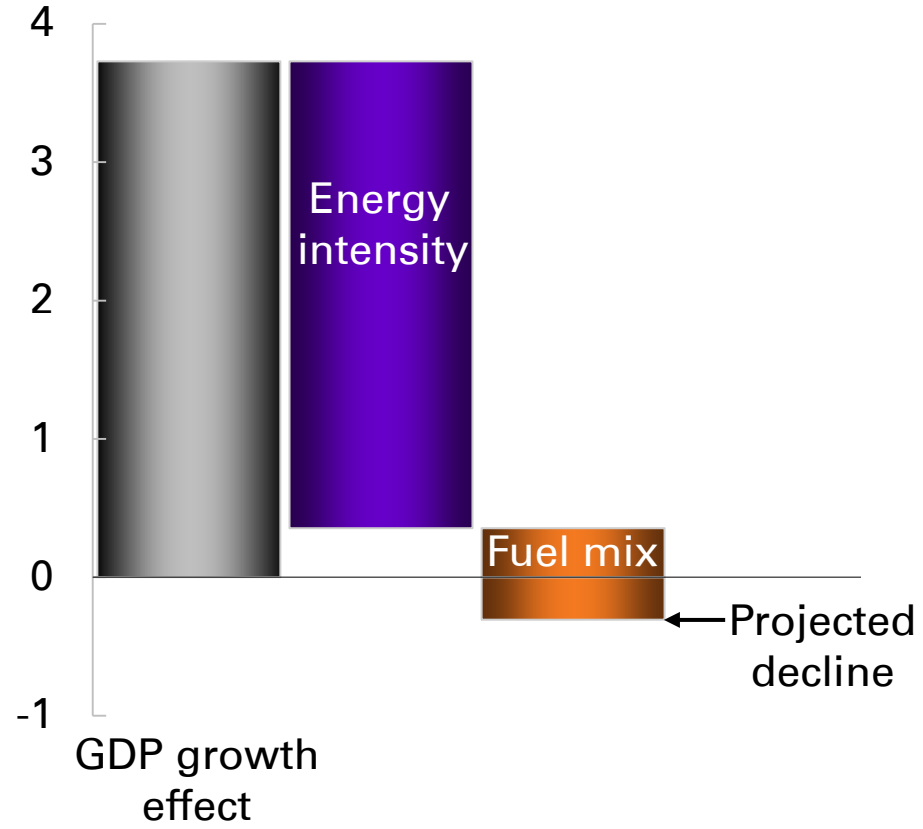

## GDP, energy and emissions

Index: 1990 = 100

## Emissions growth 2012 to 2035

Billion tonnes CO<sub>2</sub>

# Power sector is the main driver of regional fuel mix changes

## Share of power sector fuel consumption

# Conclusion

---

## Meeting the global/North American energy challenge

- Sufficient and available?
  - Yes – new energy sources and efficiency improvements
  - North America leads the way
- Secure and reliable?
  - Mixed – improving for North America, a concern for others
- Sustainable?
  - Room for improvement, even with lower North American emissions
